## Climate and Vegetation Report

D1

Adapting in response to the current environmental conditions ...

Seasonal trends in rainfall and vegetation (2023 / 2024 Season)

### Vegetation cover trend (2000 - 2023)

High vegetation cover is good because more rainwater is prevented from running off, causing less erosion. Also, the soil is shaded leading to a decrease in soil temperature and evaporation.

Plant cover has remained the same over time

#### Vegetation cover : 2023

### Fire management

#### Burns between 2000 and 2023

#### Times burned

Apr-Jul: 43.4 sq.km, 7.8 %

Aug-Dec: 39.7 sq.km, 7.1 %

Prevent late burns next season

#### When and where it burnt in 2023

#### Burned area

Climate and vegetation patterns assist in our understanding of the status of wildlife and livestock in the conservancy for the effective management of these resources.

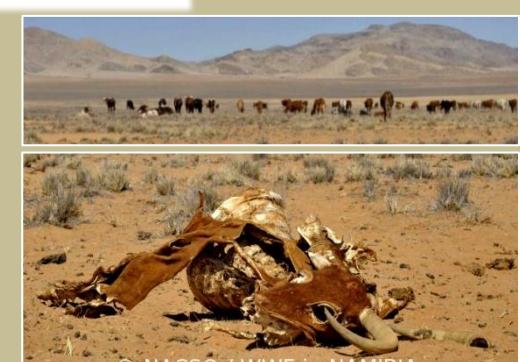

### Vegetation productivity (February to April) 2024

#### Growing season

#### Zones

- 1) Settlement & Cropping Area
- 2a) Multiple Use: Livestock Priority
- 2b) Multiple Use: Hunting Priority
- 2c) Multiple Use: Tourism Priority
- 2d) Multiple Use: Mining Priority
- 3a) Exclusive Wildlife: All Utilisation
- 3b) Exclusive Wildlife: Trophy Hunting
- 3c) Exclusive Wildlife: Tourism
- 3d) Exclusive Wildlife: No Disturbance
- 4) Forest

### Forage availability

During the growing season enough forage must be produced to sustain livestock and game until the next rainy season

#### Management Options

- Do nothing
- Buy more animals
- Move animals to better grazing
- Sell old and unproductive animals
- Acquire additional forage

Below normal forage availability  
- Enough for livestock and game?
