

maximising wildlife returns by minimising threats...

Performance Indicators

| Management performance in 2023     |             |  |  |
|------------------------------------|-------------|--|--|
| Category                           | Performance |  |  |
| 1 Adequate staffing                |             |  |  |
| 2 Adequate expenditure             |             |  |  |
| 3 Audit attendance                 |             |  |  |
| 4 NR management plan               |             |  |  |
| 5 Zonation                         |             |  |  |
| 6 Leadership                       |             |  |  |
| 7 Display of material              |             |  |  |
| 8 Event Book modules               |             |  |  |
| 9 Event Book quality               |             |  |  |
| 10 Compliance                      |             |  |  |
| 11 Game census                     |             |  |  |
| 12 Reporting & adaptive management |             |  |  |
| 13 Law enforcement                 |             |  |  |
| 14 Human Wildlife Conflict         |             |  |  |
| 15 Harvesting management           |             |  |  |
| 16 Sources of NR income            |             |  |  |
| 17 Benefits produced               |             |  |  |
| 18 Resource trends                 |             |  |  |
| 19 Resource targets                |             |  |  |

Key to performance indicators

weak/bad

reasonable

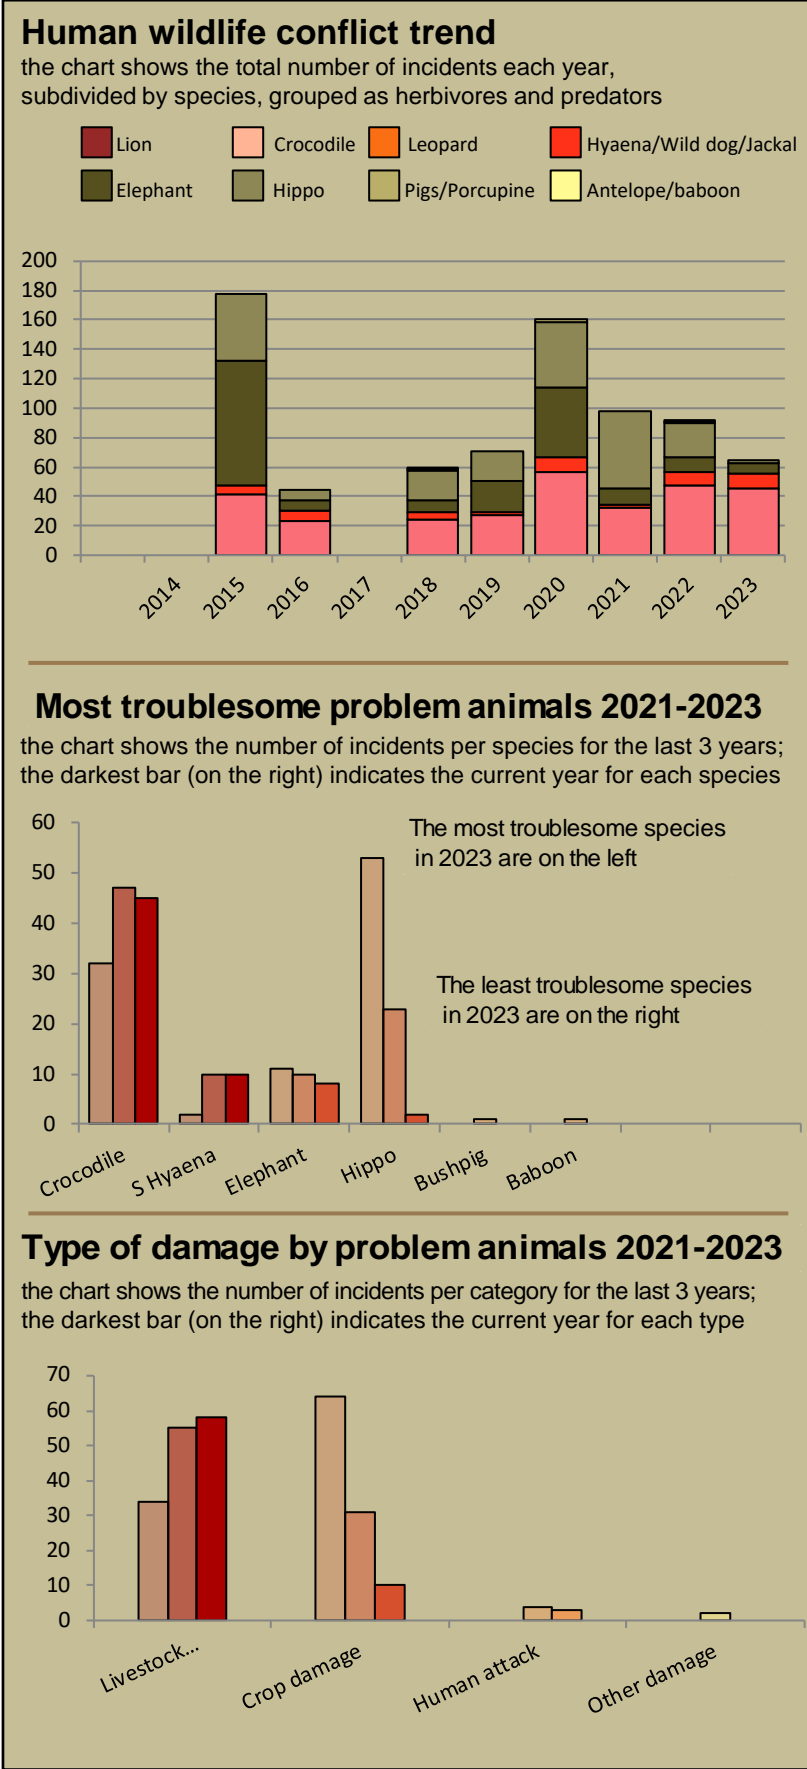

good

Performance is assessed on a scoring system from zero (none) to a maximum of between 3 and 6 (strong/excellent) depending on the indicator.

Indicators 1-17 reflect the performance of the management team in place in the conservancy and an efficient team can achieve a good rating in all 17 indicators.

Indicators 18 & 19 are influenced by external factors and are not considered a reflection of conservancy management. They indicate the current status of wildlife in the conservancy in relation to a theoretical optimal situation.

Human wildlife conflict

Poaching

Wildlife removals – quota use and value

| Potential value estimates (N\$) for a single animal:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Species      | Quota 2023 |        |           | Animals actually used in 2023 |                   |              |                |                |           | Potential        |                     |

Effective monitoring is key to understanding the status of wildlife in the conservancy and for the effective management of these resources.

Conservancies reduce environmental costs while increasing environmental returns. Returns from wildlife can far outweigh human wildlife conflict costs.

# monitoring numbers and trends for a healthy conservancy...

## Current wildlife numbers and status

## Fixed route patrols

charts show the number of sightings of each species per fixed route foot patrol each year. Status flags reflect the general sightings trend over the last 5 years

**Flags**

## Wildlife introductions

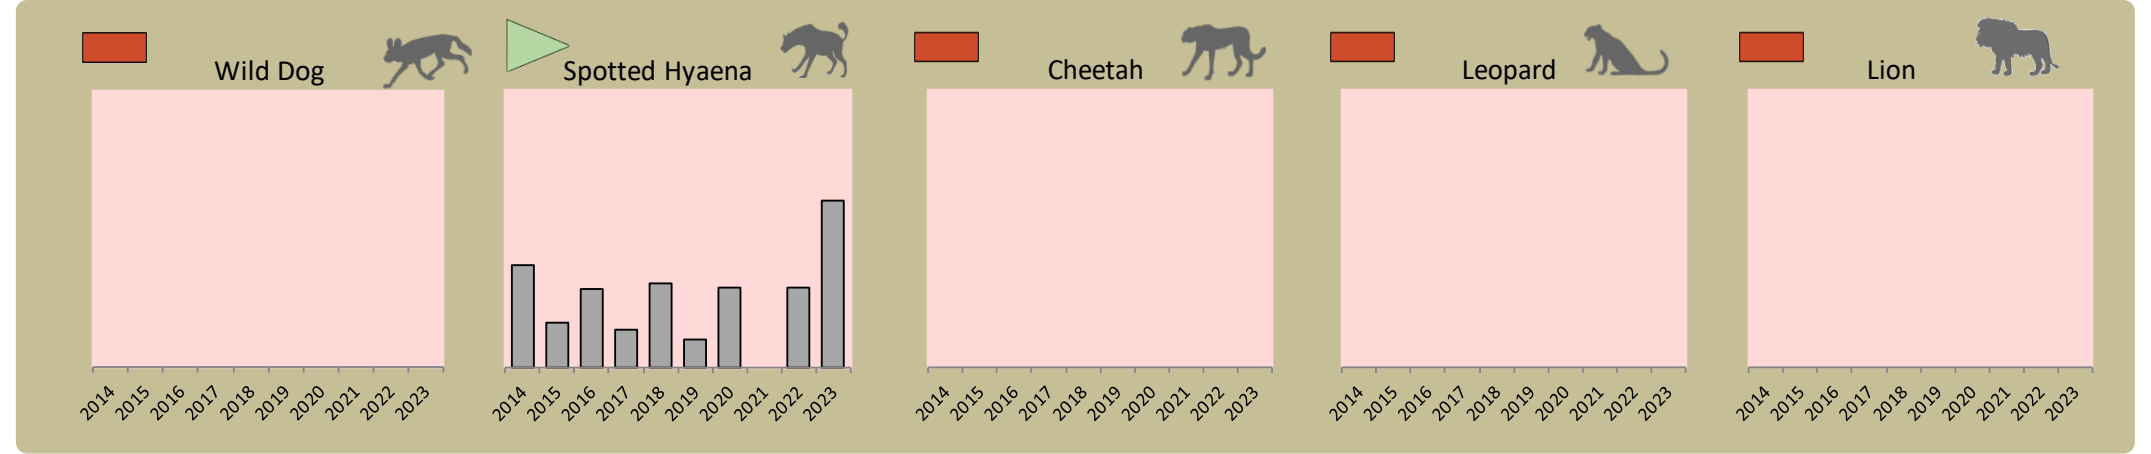

## Wildlife mortalities

## Locally rare species

## Vegetation monitoring

## Predator monitoring

Wildlife provides a wide range of benefits. Some wildlife can cause conflicts, but all wildlife is of value to tourism, trophy hunting and a healthy environment.

By using all the available information and adapting and improving activities, threats such as human wildlife conflict, poaching and other issues can be minimised.

## Enabling wise conservancy governance...
