Climate and Vegetation Report

D1

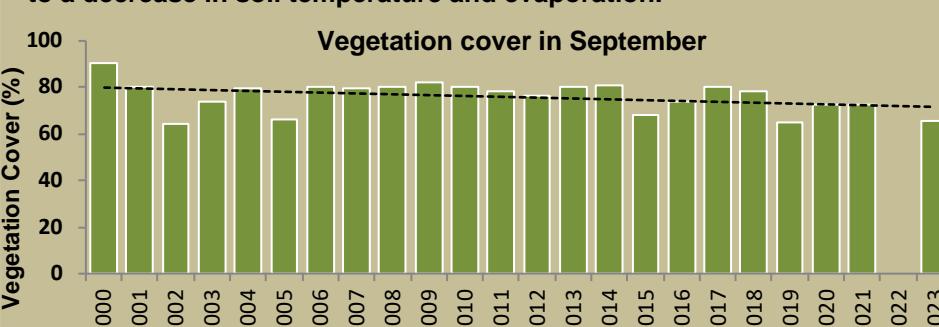

Adapting in response to the current environmental conditions ...

Seasonal trends in rainfall and vegetation (2023 / 2024 Season)

Vegetation cover trend (2000 - 2023)

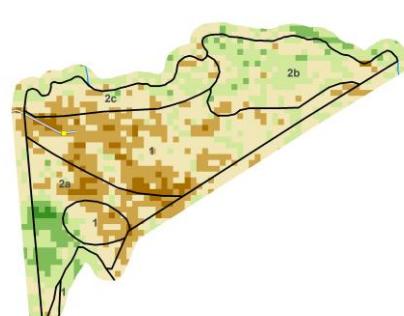

High vegetation cover is good because more rainwater is prevented from running off, causing less erosion. Also, the soil is shaded leading to a decrease in soil temperature and evaporation.

Plant cover is decreasing -
Why?

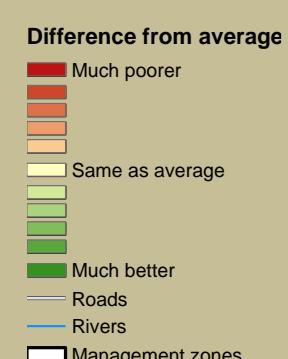

Vegetation cover : 2023

- Good vegetation cover
- Same as average
- Much better
- Roads
- Rivers
- Management zones

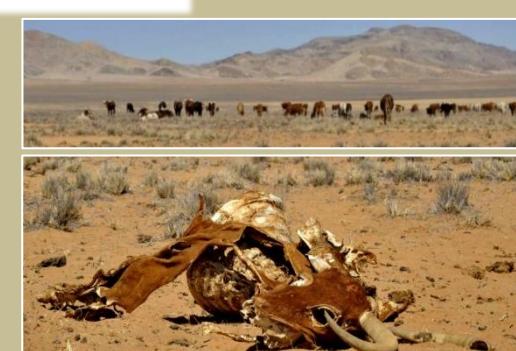

Vegetation productivity (February to April) 2024

Growing season

Zones

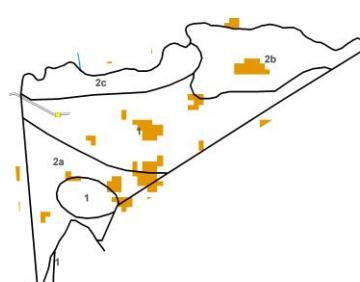

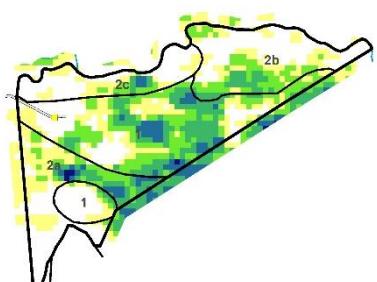

- 1) Settlement & Cropping Area
- 2a) Multiple Use: Livestock Priority
- 2b) Multiple Use: Hunting Priority
- 2c) Multiple Use: Tourism Priority
- 2d) Multiple Use: Mining Priority
- 3a) Exclusive Wildlife: All Utilisation
- 3b) Exclusive Wildlife: Trophy Hunting
- 3c) Exclusive Wildlife: Tourism
- 3d) Exclusive Wildlife: No Disturbance
- 4) Forest

Fire management

Burns between 2000 and 2023

When and where it burnt in 2023

Times burned

- 1 - 2
- 3 - 5
- 6 - 9
- 10 - 13
- >13

Apr-Jul: 0 sq.km, 0 %

Aug-Dec: 17.6 sq.km, 6.1 %

Prevent late burns next season

Burned area

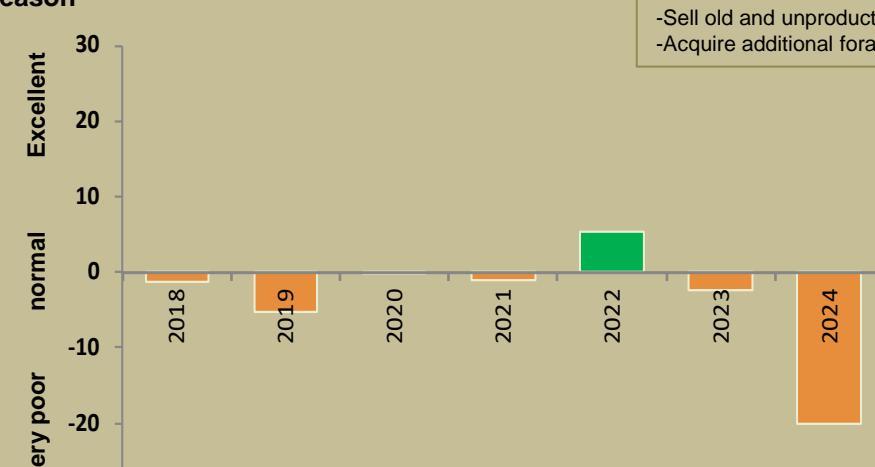

- April - July
- Aug - December

Forage availability

During the growing season enough forage must be produced to sustain livestock and game until the next rainy season

Management Options

- Do nothing
- Buy more animals
- Move animals to better grazing
- Sell old and unproductive animals
- Acquire additional forage

Below normal forage availability
- Enough for livestock and game?
